Precision Gas Turbine Consulting, Inc.
1921 SW 73rd Avenue
Plantation, Florida 33317

Dear Mike:

I am writing to express my appreciation with PGT's performance during the recent major inspection of our Siemens V84.2 Unit 1201. The outage was performed without any safety, environmental or human performance incidents. It was also completed in an industry leading 31 days, which was ahead of schedule and under budget.

This was all done without any support from the OEM!

The dedication and professionalism demonstrated by the PGT Team was outstanding. They were more like "instructors" who worked great with the craft personnel. They took the time to explain outage issues and the inspection process to members of the Bergen management team.

During a celebration of the outage success, the Fossil President asked some of the craft personnel "...why did the outage go so well?..." The craft responded with nothing but positive accolades about the PGT Team.

I look forward to working together on future projects and to growing the PGT / PSEG relationship.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeffrey L Stokes", is written over a faint, large watermark of the Bergen Generating Station.
