Subject: Letter of Recommendation for Precision Gas Turbine

To Whom It May Concern:

Precision Gas Turbine (PGT) recently completed the second Major Inspection on PowerSouth Energy Cooperative's V84.2 Combustion Turbine at the McWilliams Power Plant. PGT was responsible for supplying the supervision, specialty personnel, specialty tooling, and commissioning engineers. They also coordinated with subcontractors to supply the labor, bolt heating, dust-blasting and NDE services.

On several occasions, PGT was delayed by weather and parts issues out of their control. When these issues were encountered, PGT was willing to deviate from their scheduled tasks and re-focus their efforts to allow them to move the project's progress forward. Their dedication to overcome any obstacle was tested numerous times. Despite these challenges, PGT successfully completed the outage ahead of schedule.

Over the course of the outage, PGT's staff proved themselves to be experienced, knowledgeable, and conscientious. PGT employees also possess strong work ethics and high levels of integrity in their work. It became apparent that they dedicate their time and efforts to ensure the quality of their work exceed all expectations.

PGT efficiently and effectively managed multiple contractors with strict deadlines and competing demands while remaining helpful and available to the customer. While PGT remains professional in their business relationships, they promote friendly atmosphere and a sense of teamwork. This is evident to the customer, as well as the subcontractors. The feedback received concerning PGT from every level of the plant has been positive.

It is my pleasure to recommend Precision Gas Turbine without reservation. Please feel free to contact me with any specific concerns that you may have.

Sincerely,

Wes Thomasson, P.E.
